

(a) H₂O at 400 K

(b) density error at equal pressure, 400 K

(c) CH₄/H₂O mixture, ~400 K

Pressures from NVE, T-corrected to 400 K with the reference $(dP/dT)_\rho$ (pure fluids only); bars = seed std (GRACE) or block stderr (MACE), in (b) times the reference compressibility. Reference EOSs via CoolProp, validated to 1 GPa.
